

Licenses

Machine

A valid Client Identifier is required to install the API. This Client Identifier is linked to the machine on which the API is activated.

The API Client Identifier associated with a machine cannot be unlinked, i.e. there is no uninstallation nor reset of an API license.

Concurrent Access

The number of concurrent accesses is managed via the license agreement. A concurrent access corresponds to the number active instance of the API on the machine. If the API is installed on a server with only one concurrent access, the server will not be able to process more that one request simultaneously.

There is no limitation on the number of different models that can be used by the API.

Developer License

The Developer license is for the application developers only. This license allows to have two concurrent instances running simultaneously on the development machine in order to be able to test multi-access applications.

This license is not an END USER license.

Deployment License

In order to internally or externally distribute products or services that integrate the API, please contact us to for the terms and conditions of the license. The license will define the number of machines/servers and concurrent accesses.
